

# Windows 8 Metro Tile Groups

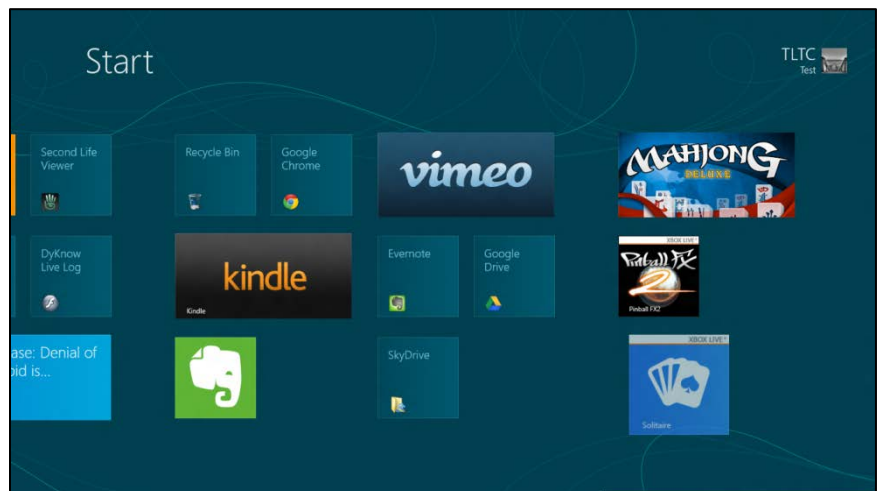

Windows 8 Metro Tiles can be arranged into groups, and then the groups can be labeled, providing both organization and personalization of Tiles.

## Grouping Tiles

1. Groups are divided by 'white space' between each set of tiles

2. Pressing and holding a tile for a few seconds will display a check mark in the upper right corner. Drag the tile to the desired location

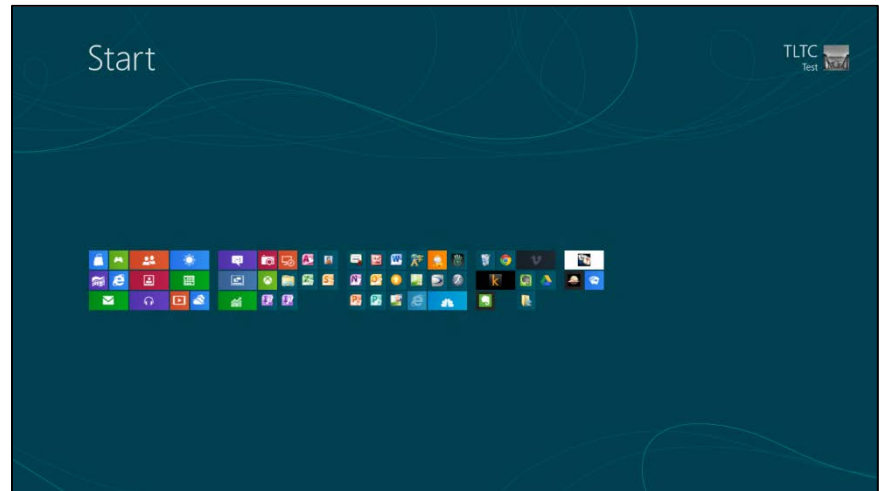

3. When a tile is dropped over a group, it will be auto-aligned.

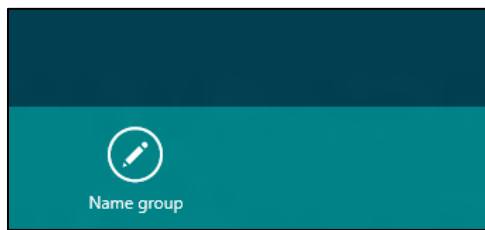

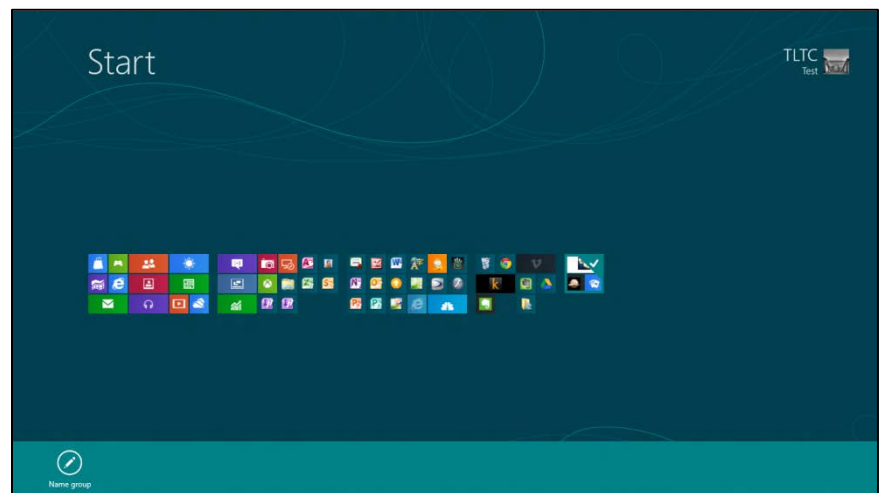

## Labeling Tile Groups

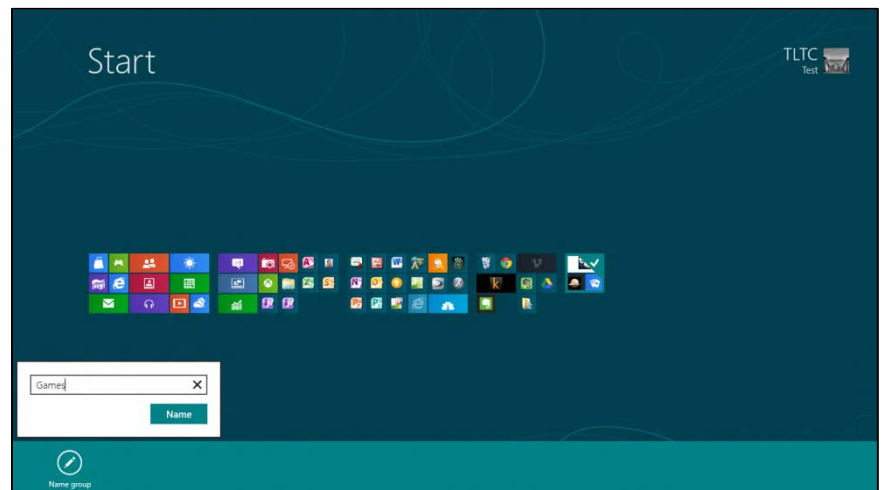

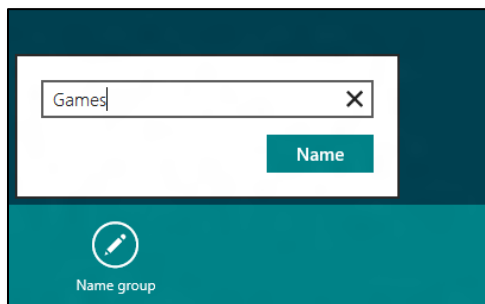

1. The two-finger **pinch-in** gesture will display all groups of tiles

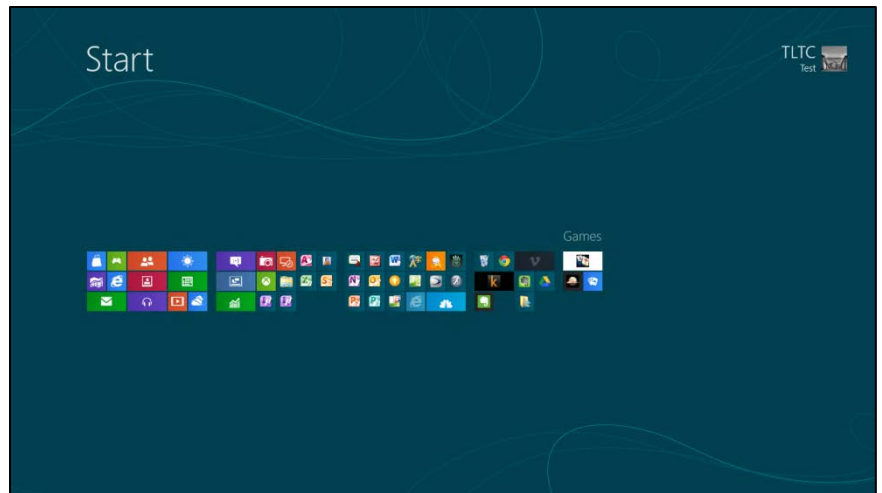

2. **Pressing and holding** a tile group for a few seconds will display a check mark in the upper right corner. Drag the tile group down and release to display the option bar at the bottom of the window.

3. Select the **Name group** option and enter a description

4. The name of the group will be displayed above the group.

5. The two-finger spread gesture will return the zoom level to the standard view.
